Vinyl Maintenance

Avoiding the cruddy build-up in the grooves and texture

Having trouble keeping your vinyl flooring clean? Crud building up in the texture? At least 90% of the time, we can fix the build-up issues by switching the cleaners you have been using to either ammonia and water, or using the cleaner made by Armstrong or Mannington. We carry Armstrong's Once N' Done No-Rinse Vinyl Floor Cleaner and customers have sworn by it for about 40 years. It leaves virtually no residue to build up. Other cleaners are designed to sell cleaner, not to protect your floor. They leave a sticky residue that grabs the dirt, causing you to have to clean it more often. Due to the high concentration level of Armstrong Once N' Done, you will find the product is very economical to use. Long-term use of other cleaners, waxes, and polishes may require stripping the floor with Armstrong New Beginnings Vinyl Floor Stripper prior to beginning a routine usage of Once N' Done.
